Women in Chile

yesterday and today

This booklet offers one woman's view of the position of women in the struggle for freedom in Chile. Written by a Chilean woman living in exile, it describes the historical background to the present women's movement that has emerged under the military regime and argues that the basic polemic that divides this movement is between "las feministas" and "las politicas". It recognises that women have played an active part in Chilean politics and that, while this process continues at present, it is often within the context of political parties and other such groups. The women's movement is changing in Chile and this booklet is an important perspective on Chilean women in active struggle.
